

SOFTWARE REQUIREMENTS SPECIFICATION

Channel & Multi-Channel Management System

Document Version	3.0 — Updated
Prepared By	CodesGenesys Technology Pvt. Ltd.
Client	Hoor Tex / Simnani Textile
Status	Draft — For Client Review
Classification	Confidential
Platforms	Web Application + Android & iOS Mobile Application
Changes in v4.0	Added: SKU media & dual pricing, customer master form, scan-based order creation (retail/wholesale), flexible payment with installments & credit control, daily reconciliation, updated CCTV flow, challan print format, barcode label & statement printing

1. Introduction

1.1 Purpose

This SRS v4.0 defines all functional and non-functional requirements for the Channel / Multi-Channel Management System. It incorporates all client-confirmed updates including SKU enhancements, dual pricing, customer management, scan-based order creation with retail/wholesale flows, flexible wholesale payment with credit control, daily reconciliation, updated CCTV recording flow, challan print format, and the full print module.

1.2 Scope

The system is a full-stack platform (Web + Mobile) for garment distributor Simnani Textile, Surat. It covers: SKU management with media uploads, customer master, inventory tracking, scan-based order creation (retail & wholesale), multi-mode payments with installments, LR management with SMS, CCTV dispatch verification, analytics, and printing of barcodes, challans, and daily collection statements.

1.3 Out of Scope — Current Phase

- Billing / GST Invoice module — deferred to a future phase.

1.4 Definitions & Acronyms

Term	Definition
SKU	Stock Keeping Unit — unique identifier per product variant

LR	Logistics Receipt — transport document issued at dispatch
Challan	Dispatch note issued with each outgoing shipment; printed per Simnani Textile format
Retail Order	Order placed by an end customer; paid in full via UPI or Cash
Wholesale Order	Trade order; supports partial payments, installments, and credit terms
Credit Limit Days	Maximum number of days a wholesale customer is allowed outstanding balance
Advance Payment	Partial payment collected at the time of wholesale order creation
Installment	Subsequent partial payment against a wholesale order's remaining balance
Daily Reconciliation	End-of-day matching of all collected cash, UPI, and bank transfer amounts
Challan	Formatted dispatch note per Simnani Textile layout including add/less adjustments
CCTV	Closed-Circuit Television — used for dispatch video verification
NVR	Network Video Recorder
RTSP/ISAPI	IP camera protocols for system integration
SMS	Short Message Service — customer notification via Authkey.io
RBAC	Role-Based Access Control

2. System Overview

2.1 Modules In Scope

- SKU Management — with multi-image/video upload and retail/wholesale dual pricing
- Customer Master — full trade details, credit limit, broker, transport
- Inventory Management — live stock tracking with barcode scan or manual SKU selection
- Order Management — scan-based creation, retail/wholesale toggle, phone lookup
- Payment System — retail (UPI/Cash), wholesale (Bank Transfer/UPI/Cash, installments, credit control)
- Daily Reconciliation — end-of-day cash, UPI, bank transfer matching
- LR Management — challan entry, photo/PDF upload, SMS link to customer
- CCTV Dispatch Verification — label print, Order ID scan, manual start/stop recording
- Print Module — barcode labels, challans (retail & wholesale), daily collection statement
- Advanced Analytics & Reporting
- Communication — Authkey.io SMS gateway

2.2 Platform Scope

Web Application (Office)	Mobile Application (Godown / Sales)
SKU management, customer master, full dashboard	Barcode scan for order creation (retail)
Wholesale order creation and payment management	Manual SKU stock addition

Daily reconciliation and analytics	Dispatch, LR upload, challan print
CCTV retrieval and footage management	Customer lookup and creation
Barcode label and challan printing	Daily collection statement print

2.3 System Flow Diagram

The diagram below shows the end-to-end operational flow.

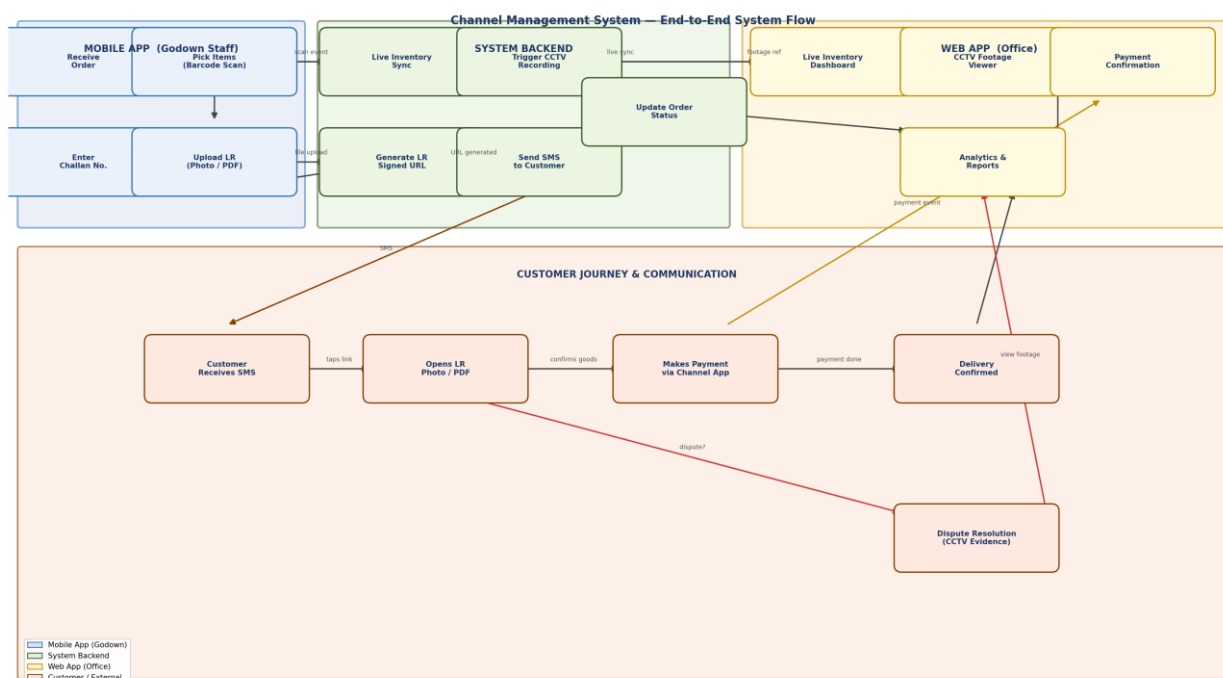

Figure 1: Channel Management System — End-to-End System Flow

3. Functional Requirements

3.1 SKU Management

3.1.1 SKU Creation & Media

- The system shall allow creation of SKUs with the following attributes: SKU code, design name, colour, size, fabric type, and category.
- The system shall support upload of multiple images per SKU (JPEG/PNG, max 5 MB each, up to 10 images per SKU).
- The system shall support upload of multiple videos per SKU (MP4, max 50 MB each, up to 3 videos per SKU).
- Uploaded SKU media shall be stored in cloud object storage (Cloudflare R2) and served via CDN-backed URLs.
- SKU images shall be viewable as a gallery on both Web App and Mobile App.

3.1.2 Dual Pricing Structure

- Each SKU shall carry two independently configurable prices:

- Retail Price — applied automatically when order type is set to Retail
- Wholesale Price — applied automatically when order type is set to Wholesale
- Both prices shall be editable by admin-role users at any time.
- Price history changes shall be logged in the SKU audit trail with timestamp and user.
- The system shall prevent order creation if either price is missing or zero for the selected SKU.

3.2 Customer Master

3.2.1 Customer Record Fields

Each customer record shall capture the following mandatory and optional fields:

Field	Description	Required
Name	Customer / company name	Mandatory
Address	Full street address	Mandatory
Area	Locality / area name	Optional
City	City name	Mandatory
State	State name	Mandatory
Pincode	6-digit PIN code	Mandatory
Phone No.	Primary contact number	Mandatory
WhatsApp Mobile	WhatsApp-linked number (may differ from phone)	Optional
Email	Email address for statements and alerts	Optional
GST No.	GSTIN — 15-character alphanumeric	Optional
Broker	Broker name associated with this customer	Optional
Transport Name	Default transporter / courier preference	Optional
Credit Limit Days (Cr Day)	Maximum days allowed for outstanding balance	Optional
Credit Limit (Cr Limit)	Maximum outstanding amount allowed	Optional
Remarks	Any internal notes about the customer	Optional

3.2.2 Customer Lookup at Order Creation

1. User enters a phone number in the order creation screen.
2. System checks if a customer with that phone number exists.
3. If found: customer name and details are auto-fetched and displayed.
4. If not found: system presents an inline customer creation form with all fields above.
5. New customer record is saved to the master database upon order confirmation.

3.3 Inventory Management

3.3.1 Stock Entry — Scan or Manual

- The system shall support two methods for adding stock to inventory:
 - Barcode Scan — scan the item barcode via Android camera or hardware scanner; inventory updates automatically
 - Manual SKU Selection — user searches and selects from the SKU list, enters quantity and location without scanning
- Both methods shall produce identical inventory records and audit log entries.
- Stock levels shall update in real time across all connected sessions upon each entry.

3.3.2 Live Inventory Tracking

- Live dashboard showing current stock per SKU at Godown and Office.
- Low-stock alerts when any SKU falls below configurable minimum threshold.
- Inventory ageing flags for items in stock beyond 30 / 60 / 90 days.
- Full audit trail for all inventory movements — who, what, when, from where.

3.4 Order Creation Flow

3.4.1 Scan-Based Order Creation

Orders are created by scanning items. The system shall support the following flow:

6. User selects order type: Retail or Wholesale (toggle at order creation screen).
7. User enters customer phone number; system auto-fetches or prompts creation.
8. User scans item barcodes one by one; each scan adds the item to the order.
9. System applies Retail Price or Wholesale Price automatically based on order type.
10. User reviews order summary (items, quantities, total) before confirming.
11. On confirmation, order is created and assigned a unique Order ID.

3.4.2 Retail Order

- Retail orders use Retail Price per SKU.
- Payment modes available: UPI, Cash.
- Payment is expected in full at time of order or dispatch.
- Retail order creation is available on both Web App and Mobile App.
- On mobile, scanning is done via device camera; on web, via hardware barcode scanner.

3.4.3 Wholesale Order

- Wholesale orders use Wholesale Price per SKU.
- Payment modes available: Bank Transfer, UPI, Cash.
- Supports partial payment — an advance amount can be recorded at order creation.
- Remaining balance is tracked against the customer's account.
- Wholesale order creation is available on the Web App.

3.5 Payment System

3.5.1 Retail Payment

- Accepted modes: UPI, Cash.
- Full payment required; order cannot be marked 'Completed' until payment is confirmed.
- Payment screenshot upload (JPEG/PNG) as evidence; stored against order record.

3.5.2 Wholesale Payment — Installments & Advance

- Accepted modes: Bank Transfer, UPI, Cash.
- At order creation, an advance payment amount may be recorded along with mode and screenshot.
- Remaining balance is calculated automatically: Total Order Value – Advance = Outstanding.
- Additional installments can be added at any time with:
 - Payment amount
 - Payment mode (Bank Transfer / UPI / Cash)
 - Remarks / reference number
 - Attachment — payment screenshot or bank receipt (optional)
- Customer balance updates automatically after each installment is confirmed.
- Full payment history per order is visible on the order detail screen.

3.5.3 Credit Control

- Each wholesale customer record may have a Credit Limit Days (Cr Day) and Credit Limit amount configured.
- The system shall track each wholesale customer's total outstanding balance and oldest unpaid invoice date.
- The system shall send an in-app alert to the admin when:
 - A customer's oldest outstanding invoice reaches or passes its Credit Limit Days threshold
 - A customer's total outstanding balance reaches or exceeds their Credit Limit amount
- A weekly automated email shall be sent every Monday morning to the designated accountant email address summarising all customers with outstanding balances, oldest invoice date, and days overdue.
- Admin shall be able to place a customer on 'Credit Hold' — preventing new orders until balance is cleared.

3.6 Daily Reconciliation

- An end-of-day reconciliation screen shall be available to the admin on the Web App.
- The reconciliation shall display a summary of all collections for the selected date, broken down by:
 - Cash collected
 - UPI collected
 - Bank Transfer collected
 - Total Retail orders and their value
 - Total Wholesale orders and their value
 - Advances received on wholesale orders
 - Installments received on wholesale orders
- The admin shall be able to mark the day as 'Reconciled' once verified.
- The daily reconciliation statement shall be printable from both Web App and Mobile App.
- All reconciliation records shall be stored with the admin user ID and timestamp of reconciliation.

3.7 LR (Logistics Receipt) Management

3.7.1 Challan & LR Linking

- Challan Number is a mandatory entry at dispatch; it links the dispatch record to the LR.

- LR document attached as photo (JPEG/PNG via camera) or PDF; max 10 MB.
- System auto-generates a public signed URL for the LR document (default expiry: 90 days).
- SMS with LR link automatically sent to customer's phone number on dispatch confirmation.
- SMS log maintained per order with status (Sent / Delivered / Failed) and re-send option.

3.7.2 Logistics Status Tracking

- Office staff can update logistics status: In Transit, Out for Delivery, Delivered, Returned.
- Full logistics timeline per order from dispatch to delivery maintained on both platforms.

3.8 CCTV Dispatch Verification

3.8.1 Updated Recording Flow

The CCTV recording flow is linked to Order ID labels, replacing automatic barcode-triggered recording. The updated flow is:

12. A label containing the Order ID is printed by godown staff and placed on the parcel.
13. Staff opens the CCTV module on the Web App or Mobile App.
14. Staff enters or scans the Order ID. The system auto-fetches and displays the customer name as confirmation.
15. Staff clicks 'Start Recording'. The system sends a recording-start command to the linked camera via ISAPI and logs the start timestamp against the Order ID.
16. Staff packs and dispatches the order in front of the camera.
17. Staff clicks 'Stop Recording'. The system sends a stop command to the camera and logs the end timestamp.
18. The completed video clip is permanently linked to the Order ID and retrievable from the order detail screen.

3.8.2 Footage Retrieval

- Office staff can retrieve footage by Order ID or Challan Number from the Web App.
- Footage is viewable inline; downloadable and shareable link available.
- Minimum retention: 90 days on NVR local storage.

3.8.3 Camera Integration

- Hikvision ISAPI (HTTP REST) or RTSP — built-in to Hikvision/CP Plus cameras; no extra licensing.
- Estimated integration dev effort: 3–5 working days.

3.9 Challan Print Module

3.9.1 Challan Format — Simnani Textile

The system shall generate a formatted challan document for all dispatched orders. The challan layout shall conform to the following structure:

Section	Content
Company Header	Company Name (SIMNANI TEXTILE), Contact numbers
Party Details	Party Name (M/s. prefix), Full address, Mobile number
Challan Meta	Challan No., Date (DD/MM/YYYY format)
Items Table	No., Description (SKU code), PCS, Rate, Amount — one row per SKU

Summary Table	Add % and Amount, Less % and Amount, Total PCS, Final Amount
Terms & Conditions	Fixed text: (1) Goods checked and packed carefully before dispatch; (2) Cheque Return Charge ₹500; (3) Subject to Surat jurisdiction only
Footer	Authorised Signatory line

3.9.2 Challan Printing Rules

- Challan shall be printable for both Retail and Wholesale orders.
- Challan print shall be available from the Web App (desktop print dialog) and Mobile App (Bluetooth thermal printer or standard A4 print via share/PDF).
- Each challan print event shall be logged with timestamp and user.
- Challan data shall be auto-populated from the order record; no re-entry required.

3.10 Print Module

3.10.1 Barcode Label Printing

- The system shall generate printable barcode labels for each SKU.
- Label format shall include: SKU code (as barcode), design name, colour, size, and retail/wholesale price.
- Labels shall be printable in bulk (select multiple SKUs) from the Web App.
- Mobile App shall support printing a single SKU label via Bluetooth label printer or PDF export.

3.10.2 Daily Collection Statement

- The daily reconciliation statement shall be printable as a formatted document from both Web App and Mobile App.
- Statement shall include: date, total cash, total UPI, total bank transfer, total retail orders & value, total wholesale orders & value, advances, installments, and grand total collected.
- Statement shall carry the admin's name, designation, and timestamp of reconciliation.

3.10.3 Challan

- Challan printing is detailed in Section 3.9. Available from Web App and Mobile App for all dispatched orders.

3.11 Scanning Options

- Retail-side order scanning shall be supported via:
 - Hardware barcode scanner device connected to the Web App via USB or Bluetooth
 - Mobile device camera via the Mobile App — scan and order creation handled entirely on mobile
- Wholesale-side order creation scanning shall be supported via hardware scanner on the Web App.
- Inventory stock-in scanning shall be supported via both hardware scanner (Web) and mobile camera (Mobile App).
- Manual SKU selection (without scan) shall remain available on both platforms for all inventory operations.

3.12 Advanced Analytics & Reporting

- Sales reports: filterable by date, channel, customer, design, order type (retail/wholesale).
- Top-selling designs: ranked by units and revenue, with slowest-moving designs alongside.

- Inventory ageing: 0–30 / 31–60 / 61–90 / 90+ day brackets.
- Customer order history: all orders, payment status, outstanding balance, LR details.
- Outstanding balance report: all wholesale customers with overdue days flagged.
- All reports exportable to Excel (.xlsx) and PDF from the Web App.

3.13 Communication & Notification System

- Authkey.io SMS gateway for LR link delivery, payment alerts, low-stock notifications.
- Weekly automated email to accountant: all outstanding wholesale balances (every Monday).
- Admin in-app alerts for credit limit breaches and overdue customers.
- All SMS and email communications logged with status and timestamp.

4. Non-Functional Requirements

4.1 Performance

- Barcode scan to inventory/order update: within 2 seconds.
- Customer phone lookup response: within 1 second.
- Live dashboard refresh: every 10–30 seconds (configurable).
- Report generation: within 5 seconds for standard, 15 seconds for complex.
- LR SMS delivery: within 30 seconds of upload confirmation.
- Minimum 20 concurrent users without degradation.

4.2 Security

- TLS 1.2+ for all data transmissions.
- RBAC: Godown Staff, Sales Staff, Office Staff, Accountant, Manager, Administrator.
- LR document links use signed URLs with configurable expiry (default 90 days).
- SKU media, LR documents, and payment screenshots in encrypted cloud storage.
- Full audit trail for all inventory, order, payment, and SKU actions.

4.3 Usability

- Mobile App: primary godown and retail operations completable in 3 taps or fewer.
- Web App: compatible with Chrome, Firefox, Edge, Safari.
- Mobile App: Android 8.0+ and iOS 13+.

4.4 Scalability

- Hostinger KVM 2 VPS hosting; horizontally scalable architecture.
- Supports minimum 10,000 active SKUs without performance impact.
- Cloud object storage (Cloudflare R2) for all media, LR documents, and statements.

5. Third-Party Infrastructure & Service Costs

5.1 Hosting — Hostinger KVM 2 VPS

Specification	Value	Promo Price	Renewal Price
Plan	KVM 2	—	—
vCPU / RAM / Storage	2 vCPU 8 GB RAM 100 GB NVMe	—	—
Monthly Cost	—	₹799/month	₹1,199/month
Annual Cost	—	₹9,588	₹14,388

5.2 SMS Gateway — Authkey.io

Pack	Messages	Per SMS	DLT Fee	Total
Recommended	10,000 SMS	24.5 paisa	2.5 paisa	₹3,186
Growing	25,000 SMS	20.5 paisa	2.5 paisa	₹6,785

5.3 Cloud Storage — Cloudflare R2

~₹50–200/month. Zero egress fees — recommended for LR links, SKU images/videos, payment screenshots, and barcode label PDFs.

5.4 CCTV Hardware (One-Time)

Component	Model	Est. Cost	Type
IP Camera — Premium	Hikvision DS-2CD2T47G2-L 4MP	₹4,500–6,000/unit	One-time
IP Camera — Budget	CP Plus CP-UNC-TC21L3 2MP	₹2,800–3,500/unit	One-time
NVR (4-channel)	Hikvision DS-7604NI-K1	₹8,000–12,000	One-time
Surveillance HDD (2TB)	Seagate SkyHawk 2TB	₹5,000–6,500	One-time
Installation & Cabling	Local CCTV technician	₹4,000–8,000	One-time
TOTAL (Premium, 2 cameras)	—	₹32,000–44,000	One-time

5.5 Monthly Cost Summary

Item	Monthly	Annual	Type
Hostinger KVM 2 (promo)	₹799	₹9,588	Recurring

Hostinger KVM 2 (renewal)	₹1,199	₹14,388	Recurring
Authkey.io SMS	As needed	~₹3,186–6,372	Pay-as-you-go
Cloudflare R2	~₹50–200	~₹600–2,400	Recurring
CCTV Hardware	—	₹22,000–44,000	One-time
TOTAL RECURRING — Year 1	~₹850–1,000/mo	~₹13,000–17,000/yr	Recurring

6. System Constraints

- Weekly accountant emails require a configured outbound email service (e.g. SendGrid or SMTP).
- Bluetooth label printer integration on mobile is hardware-dependent; client must procure compatible printer.
- CCTV manual start/stop recording requires NVR to be on the same local network as the Web App server or accessible via VPN.
- SMS delivery subject to Authkey.io gateway and TRAI DLT registration requirements.
- LR document file size limited to 10 MB; SKU image 5 MB each; SKU video 50 MB each.
- Internet required at godown at all times for real-time sync and CCTV API calls.

7. Assumptions & Dependencies

- Client (Simnani Textile) will complete Authkey.io DLT registration before SMS go-live.
- CCTV hardware (cameras, NVR, HDD) will be procured and installed by the client.
- Product master data (all SKUs with designs, sizes, colours) will be provided before go-live.
- Customer master data (existing customer records) will be provided for bulk import.
- Accountant email address will be provided for weekly outstanding balance reports.
- Stable internet available at godown and office at all times.
- For mobile challan printing, client will procure a compatible Bluetooth printer (Zebra, Xprinter, or equivalent).

8. Wireframe Screen Inventory

8.1 Web Application Screens

#	Screen	Module	Key Features
W-01	Dashboard	Main	Stats, live SKU top-5, today's orders, alerts
W-02	SKU Management — List	SKU	SKU table, search, filter, bulk label print
W-03	SKU Management — Create/Edit	SKU	Fields, image/video upload gallery, dual price
W-04	Customer Master — List	Customer	Customer table, search, credit status badges

W-05	Customer Master — Create/Edit	Customer	Full form: all fields including Cr Day, GST, broker
W-06	Live Inventory	Inventory	Live stock table, add stock (scan or manual SKU select)
W-07	Order List	Orders	Tabbed: All / Retail / Wholesale / Pending / Completed
W-08	Order Creation — Retail	Orders	Phone lookup, scan items, retail price, UPI/Cash payment
W-09	Order Creation — Wholesale	Orders	Phone lookup, scan items, wholesale price, advance payment
W-10	Order Detail	Orders	Items, dispatch status, CCTV, LR, payment history
W-11	Payment — Wholesale Installment	Payment	Add installment: amount, mode, remarks, attachment
W-12	Credit Control Dashboard	Payment	All customers with outstanding, days overdue, credit hold
W-13	Daily Reconciliation	Finance	Cash/UPI/Bank summary, retail/wholesale totals, reconcile
W-14	LR Management	Logistics	Challan table, LR docs, SMS status, re-send
W-15	CCTV Viewer	CCTV	Order ID entry, customer fetch, start/stop recording, footage log
W-16	Challan Print Preview	Print	Formatted challan per Simnani Textile layout
W-17	Analytics & Reports	Reports	Sales, ageing, top designs, customer history, outstanding

8.2 Mobile Application Screens

#	Screen	Module	Key Features
M-01	Home / Dashboard	Main	Pending picks, quick actions, today's orders
M-02	Barcode Scan — Stock	Inventory	Scan item to update stock; last scanned, progress

M-03	Manual Inventory Add	Inventory	SKU search & select, qty, location, reason
M-04	Order Creation — Retail (Scan)	Orders	Phone lookup, scan items, UPI/Cash payment, confirm
M-05	Customer Lookup / Create	Customer	Phone entry, auto-fetch or inline creation form
M-06	Dispatch & LR Upload	Logistics	Challan entry, LR photo/PDF upload, auto-SMS indicator
M-07	CCTV — Order ID Scan & Record	CCTV	Enter/scan Order ID, customer name shown, start/stop
M-08	Daily Collection Statement	Finance	Today's summary, print/share statement
M-09	Challan Print	Print	Formatted challan view, print via Bluetooth or PDF
M-10	Barcode Label Print	Print	Select SKU(s), print label via Bluetooth printer or PDF

9. Requirements Traceability Matrix

ID	Requirement	Module	Platform	Priority
REQ-001	SKU creation with multi-image & video upload	SKU	Web	High
REQ-002	Dual pricing: Retail + Wholesale per SKU	SKU	Web	High
REQ-003	Customer master form — all fields inc. GST, broker, Cr Day	Customer	Web + Mobile	High
REQ-004	Customer phone lookup — auto-fetch or create inline	Customer	Web + Mobile	High
REQ-005	Barcode scan + manual SKU select for inventory	Inventory	Web + Mobile	High
REQ-006	Live inventory dashboard — real-time all SKUs	Inventory	Web + Mobile	High
REQ-007	Scan-based order creation with retail/wholesale toggle	Orders	Web + Mobile	High
REQ-008	Retail order — UPI/Cash payment, full amount	Payment	Web + Mobile	High
REQ-009	Wholesale order — Bank/UPI/Cash, advance + installments	Payment	Web	High

REQ-010	Credit limit days & amount tracking per customer	Payment	Web	High
REQ-011	Admin alerts for credit limit breach / overdue	Payment	Web	High
REQ-012	Weekly accountant email — outstanding balances	Payment	Web	Medium
REQ-013	Daily reconciliation — Cash/UPI/Bank breakdown	Finance	Web + Mobile	High
REQ-014	Printable daily collection statement	Print	Web + Mobile	High
REQ-015	Challan print — Simnani Textile format	Print	Web + Mobile	High
REQ-016	Barcode label print (bulk web, single mobile)	Print	Web + Mobile	Medium
REQ-017	LR photo/PDF upload + auto-generated signed URL	LR	Web + Mobile	High
REQ-018	SMS delivery of LR link to customer	Communication	Web	High
REQ-019	CCTV — Order ID scan, customer fetch, start/stop record	CCTV	Web + Mobile	High
REQ-020	CCTV footage retrieval by Order ID / Challan	CCTV	Web	High
REQ-021	Sales, ageing, top designs, outstanding balance reports	Analytics	Web	High
REQ-022	RBAC — 6 roles	Security	Web + Mobile	High
REQ-023	Web Application — full features	Platform	Web	High
REQ-024	Mobile Application — Android & iOS	Platform	Mobile	High
REQ-FUTURE	Billing / GST Invoice module	Future Phase	TBD	Deferred

10. Appendix

10.1 Revision History

Version	Date	Changes	Author
1.0	Mar 2026	Initial SRS	CODES
2.0	Mar 2026	CCTV, LR photo/PDF+SMS, Live inventory, Analytics, Cost section	CODES
3.0	Mar 2026	Billing deferred; flow diagram added	CODES

4.0	Apr 2026	SKU media & dual pricing; customer master; scan-based order flow; retail/wholesale; installments & credit control; daily reconciliation; updated CCTV flow; challan print format; print module; scanning options	CODES
-----	----------	--	-------

10.2 Challan Sample Layout Reference

Note: The challan shall be generated per the Simnani Textile format: Company header → Party details → Challan No. / Date → Items table (No., Description/SKU, PCS, Rate, Amount) → Summary (Add%, Less%, Total PCS, Final Amount) → Terms & Conditions (3 clauses) → Authorised Signatory.
